## The Heart of Medicine Clinic

The Heart of Medicine Clinic is committed to providing evidence based cardiology care free of charge to people in our community who are uninsured due to lack of availability or means to provide their own health insurance and inability to qualify for current government sponsored health plans.

The clinic is committed to healthcare delivery that is based on the following principals:

1. Healthcare is a privilege that is provided out of the compassion and generosity of all members of the healthcare team.
2. Healthcare delivery is a partnership between the patient and members of the healthcare team.
3. Healthcare delivery that is patient focused and cooperative enables providers to use the best evidence based therapy without concerns for monetary gain.
4. Healthcare delivery that is cooperative gives practitioners the freedom to recommend multiple alternative therapies from both the allopathic, osteopathic and complimentary fields of medicine.
5. Patients have a responsibility to participate in their healthcare in both decision-making and lifestyle modifications.
6. Successful partnership in healthcare requires providers to educate patients and inform them about their disease and options for care.
7. Successful partnership in healthcare involves physicians working with the pharmaceutical and device industry to advance medical science and produce breakthroughs in treatments that make a difference in the lives of patients.
8. Successful partnership in healthcare involves physicians, hospitals and industry participating in the success and sustainability of each other.

Alphonse M. Ambrosia, DO, FACC

Medical Director, Heart of Medicine Clinic
